

Dear readers,

We are delighted to present the first issue of our online and print journal *Green Economics*, dedicated to advancing the understanding and promotion of the green economy. As the world faces pressing environmental challenges, the importance of sustainable practices and green initiatives has never been more apparent. In this journal, we strive to foster dialogue and disseminate cutting-edge research that contributes to the development and implementation of sustainable economic models.

The green economy encompasses a broad range of sectors, from renewable energy and circular economy principles to eco-friendly technologies and sustainable agriculture. It represents a shift towards a more harmonious relationship between human activities and the natural environment, with the goal of achieving long-term ecological balance and social well-being.

Our journal serves as a platform for scholars, researchers, policymakers, and practitioners to share their insights, findings, and innovative approaches to drive the green transition. We welcome interdisciplinary contributions that address various aspects of the green economy, including but not limited to policy analysis, technological advancements, economic evaluations, social impact assessments, and case studies.

With a commitment to academic rigor and relevance, the journal *Green Economics* seeks to enhance our understanding of sustainable development and provide evidence-based guidance for policymakers and stakeholders. We encourage the submission of high-quality manuscripts that push the boundaries of knowledge and contribute to shaping a greener future.

We extend our sincere gratitude to the authors, reviewers, and editorial board members for their invaluable contributions and rigorous evaluation process. Without their dedication and expertise, this journal would not be possible.

We hope that the articles in this issue inspire new ideas, encourage collaboration, and stimulate further research in the field of green economy. Together, let us strive towards a more sustainable and prosperous future for all.

Prof. Dr. Gadaf REXHEPI

Editor-in-Chief
